

Dear Sir or Madam, I am writing in response to the petition being presented by the National Association of Broadcasters, 04-160. It is my understanding this petition seeks to limit satellite radio's content, specifically Instant Traffic and Weather. My husband drives a truck for his livelihood, and he depends on satellite radio's coverage to help him travel safely across the Eastern part of the Country. One of the beauties of Satellite radio is that the reception is impecable, almost 100% of the time, so that even as he drives, he does not have to seek different radio stations for music, news or weather coverage. I do appreciate the variety and depth of programming opprtunities available on XM radio, and feel it is one of the best investments we have made. I am troubled to think that NAB may have influence on what programming satellite radio provides. I urge your rejection of petition 04-160. I also urge you to try satellite radio. You will know first hand what I mean!

Thank you.
